

Ultrasound flowmeter calibration method

Patent number: DE19605652
Publication date: 1997-08-21
Inventor: RUSWURM WINFRIED DIPL PHYS DR (DE)
Applicant: SIEMENS AG (DE)
Classification:
- **international:** G01F25/00; G01F1/66; G01S15/88
- **European:** G01F1/66; G01F1/66F; G01F25/00A
Application number: DE19961005652 19960215
Priority number(s): DE19961005652 19960215

Report a data error here**Abstract of DE19605652**

The flow meter has a measurement tube for measuring a physical value dependent on the flow velocity. The dimensions of the measurement tube are detected to determine a calibration factor. The calibration factor is then used to measure the flow vol. There is therefore no need for an experimental calibration. The dimensions of the measurement tube are determined mechanically or optically. Ultrasonic pulses are used to measure the flow volume. Pulse travel time difference measurement is used for a predetermined ultrasound path, e.g. a V or W-shaped path. The run length of the ultrasonic pulses is detected while the measurement tube is filled with a measurement medium of known acoustic velocity.
